

WHITEPAPER

NOMADLAND

EXECUTIVE SUMMARY

Discover the Nomadland Island, buy land, build farms, produce mystic flames, battle epic monsters and carnivore plants, capture and train the captured monsters and carnivore plants, evolve in rank and produce new weapons and armours, fight in Arena against other players- in this blockchain based NFT's Action RPG & strategy game built on Unreal Engine

Come dive into the NOMADLAND universe, WIN tokens as you play!

Get rewards when you stake or make BNB purchases in the game

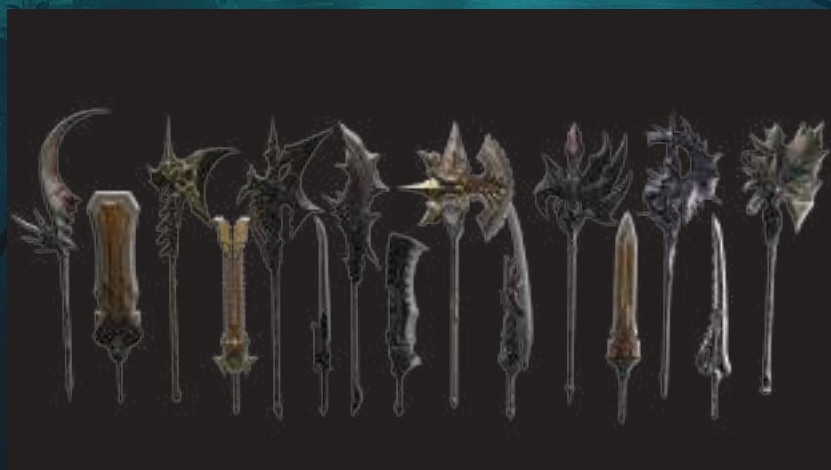

In-game NFTs are obtained via big monster and carnivore plants fights. The NFTs in Nomadland are not like the typical "collectible card" NFTs so common in crypto today. Instead, they are usable and functional NFTs that can be inserted into the Nomadland Game Framework and become special in-game items: weapons, armours, special moves, and super powers. These NFTs can be bought or sold both in the in-game exchanges (market place) or in 3rd party NFT exchanges outside the game world.

Players can stake the in-game currency (the NOMADLAND NOMAD native token) by purchasing or investing in in-game NFT's, players earn rewards as in-game businesses generate revenue.

All of these elements are built and run on the Binance Smart Chain. Each function is intertwined with the blockchain, and the NOMAD in-game currency is creatively used for these functions.

GAME OVERVIEW

Built on Unreal Engine with the Nomadland Game Framework

CHARACTERS

Ranzuhn is a mysterious character. Found on a beach around the age of 5 by his adoptive mother, he grew up in a nomadic tribe who settled in the hostile RINK MOUNTAINS.

He always had to hide the glass parts of his body so as not to be beaten by other children. He grew up in this village and learned to hunt, stealthily move and fight against creatures sometimes twice as big as him.

But one day when he comes back from hunting, he sees his village on fire, his best friend running towards him " RANZUHN !! RUN !! They're here for you ! ... " and fall in front of him, an arrow planted in the back. A horde of guards began to run towards him. He had to leave.

RINK MOUNTAIN

Rink mountain is a very young mountain compared to the origin of Ranzuhn. Originally created by the volcanic pressure which is exerted way under thickness, the mountain is in permanent movement and sharp rocks strewn its surface. The landslides and broken pieces of rock naturally form weird heaps.

Rink mountain is characterized by the color of its orange pink rock.

In this harsh climate, some cold resistant plants still manage to grow, which allows the present fauna and the inhabitants to survive (when they are not carnivores).

THE THUNDEROUS UPLANDS

The Thunderous Uplands is a dangerous environment to live. Severe thunderstorms permanently strike its heights, preventing plants from growing. Thousands of years of almost permanent rain have dug very deep crusts where life is organized. The absence of light in these hollows has forced the trees to grow very high and the plants, almost all carnivores, to feed on water and insects living around and create light themselves. In this not very hospitable huge vertical forest, a people of fisherman settled and their shamans exploit the virtues of plants.

NATIVE TOKEN

Play the game, explore the map for native token

- No more boring staking
- Invest in in-game business makes money
- Purchase in game NFT's to generate rewards

NOMADD – native token is the main in-game currency

Fully integrated with the Binance Smart Chain and can be sent seamlessly from wallet to wallet inside and outside the game world

- Can be obtained from fighting monsters, carnivore plants

GAME PLAY

Create your account, start customizations for a unique profile

Gradually discover the map and fight against the monsters and carnivorous plants encountered

Collect mystical recipes that will allow you to create new weapons or armors

Build and continuously upgrade the farm where you can grow domestic plants to create the necessary resources: collect as many mystical flames as possible – they will help you advance faster in the game and

NFT S OVERVIEW

Find, farm, and collect functional NFT s

*NFTs such as epic weapons, fast mounts, and in-game super powers

*NFTs can be used in - game as functional items, and can be sold at in-game auction houses or on 3rd party exchanges outside the game world

NOMADLAND

The NFT tokens in Nomadland are active weapons, armours, special moves which can be used in the game. While many NFTs currently in the crypto space are strictly collectibles or "artwork", the NFTs in the Nomadland NFT Framework server multiple uses.

Players can use the NFT's in the game or transfer them out of the game and sell them or exchange them on 3rd party sites.

BUY LAND

Because we want the players to be the rightful owners of the elements obtained in the game, besides NFT's we make available to the players the acquisition of land

There is a small surface of the island which is divided into plots that can be bought by players

the advantages of purchasing an island plot are innumerable, from a unique game functions to possibility of resale in time at a higher price due to limited plots for sale

TOKEN USE

The Nomadland native token will be used to purchase and swap for NFTs in-game and outside the game world. We foresee this being one of the main uses of the token. The in-game auction houses will allow players to list their NFTs for sale and swap them for the Nomadland native token.

The Nomadland token is connected to and synchronized with the Binance Smart Chain. As such, it can be easily, quickly, and cheaply sent from one wallet to another or the network. It can also be sent into and out of the Nomadland universe.

The primary use of the token is as the native in-game currency of the Nomadland island. The currency is used to purchase NFTs such as weapons, armours, special moves.

How to obtain tokens in-game

The in-game token is obtained in various ways

- players get rewards in NOMAD tokens by getting higher game ranking
- farming allows players to produce resources which can be sold to other players at the market place, allowing them to win Nomad tokens
- staking NOMAD token give nice benefits by receiving NOMAD token rewards
- sell limited resources as Land or NFT's you own at higher prices than initially purchased

Whenever these trades took place to buy or sell NFT's (weapons, armour) in-game tokens resulted as fee are sent to the burn address.

ROADMAP

2020/2021

CONCEPT AND ART DEVELOPMENT

2021 Q4

Token presale & partnerships, story & mission development.

The presale is planned during November 2021, the development of the core concepts, as well as the historic missions within the game are already underway.

2021 Q4

Signing of agreements with partners & the start of development. The hunt for suitable partners has begun NFT Storefront Partnership

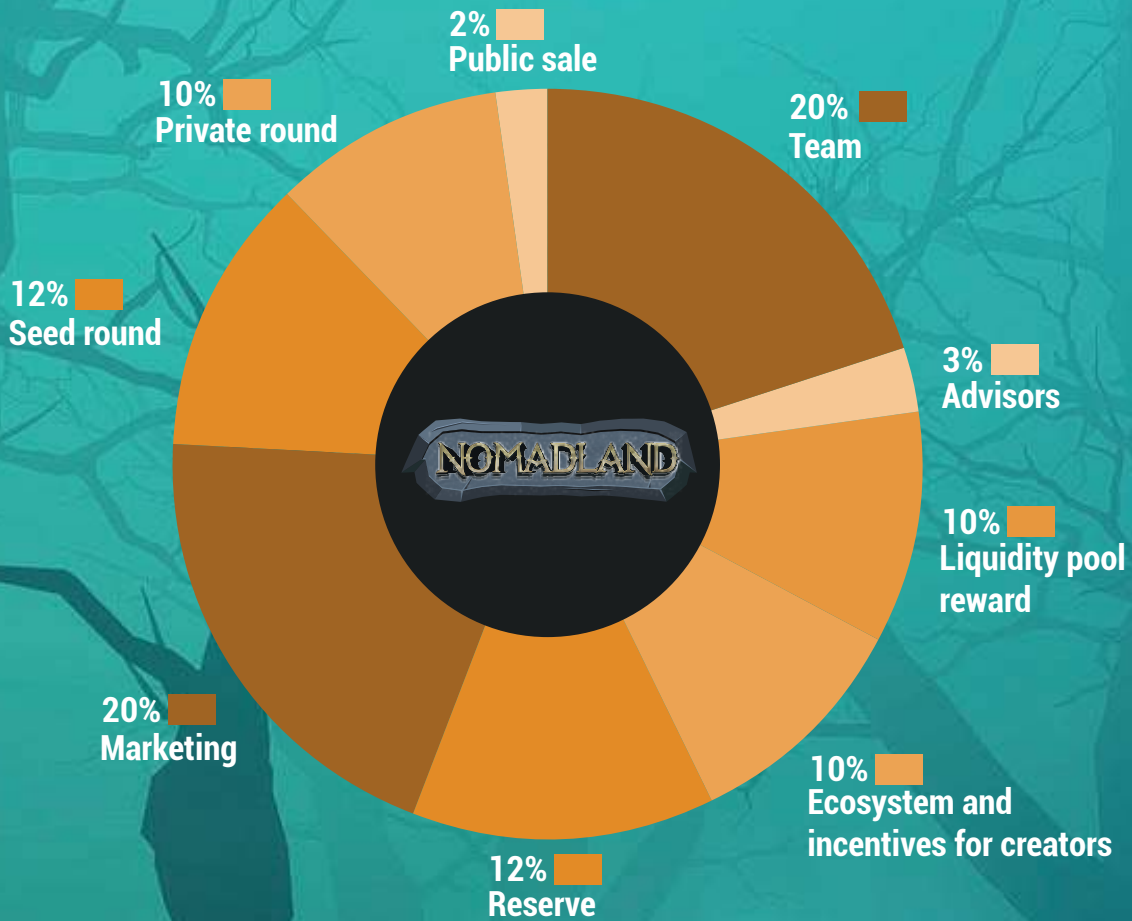

2022 Q2

TESTNET AND BETA ACCES

2022 Q3

NOMADLAND Game Goes Live
